AggieMentors

A UNIQUE COLLEGE-ACCESS PROGRAM EMPOWERING UNDERREPRESENTED YOUTH FOR SUCCESSFUL CAREERS IN THE SCIENCES

A University of California Davis Youth Education and Outreach Program
As a chapter of the national EnvironMentors’ program, the goal and mission of AggieMentors is to expose underrepresented high school students to higher education. Every year, Sacramento area high school students undertake an intensive 9-month long research project in Science, Technology, Engineering, and Mathematics (STEM). Graduate and undergraduate student mentors guide their mentees through the research process advised by faculty members. The program culminates with a science fair on local, as well as on national level, providing an opportunity to the high school students to present their research.

Over the past 7 years we have trained 164 UC Davis students to become high school student mentors.

Over 130 high school students from underrepresented and disadvantaged backgrounds have graduated from our program.

At this point more than 60 students are successfully enrolled at higher education institutions, 70% of whom are first generation college students.
